

# Welcome to Reminder

We understand that you are here to register for our SMS reminder service. Before we explain you the procedure we would like you to read the following terms-

- All the account details(including mobile numbers) are shared with Twilio, which is the SMS service provider.
- We do not store or modify your twilio account details; neither we store any mobile numbers.
- We respect your privacy hence we directly allow you to register for new numbers on twilio servers.
- The purpose of our page is just to provide a User-Server bridge between you and twilio servers and make it more useful.

## **Steps to register-**

1. Go to [www.twilio.com](http://www.twilio.com) .
2. On the top right corner, click on sign-up.
3. You will need to enter your name, email and set a password.
4. Once finished a mail will be sent to you, click on the link in that mail to verify your account.
5. After that you will need to enter your phone number and verify it with an OTP.
6. Once completed, you will see a window asking you for the purpose of using twilio. Enter a. SMS, b. Alerts & notification, c. no code, d. something else. In the respective options.
7. On the top left corner click on “my first twilio account” to open dashboard.
8. On dashboard you will see “get a trial number”, click it to get a trial number from twilio.
9. And you are done, on your dashboard you can see your trial number, s-id, token-id which will be required to send SMS.
10. Now verify the receiver’s phone number to send messages.

### **Steps to verify a receiver's phone number-**

1. On the left navigation bar, click on phone numbers->manage->verified caller IDs.
2. Here you can see the list of verified numbers. To add a new number on the top right corner click on "add a new caller ID".
3. Now enter the patient's mobile number and verify it with an OTP.
4. All done, now you can send medicine reminder SMS to the patients.

### **Note-**

- You will need to buy a full account to use twilio once the free trial ends.
- To send SMS to a new number you will need to verify it for the first time by using the above mentioned steps.
